Project Visualizations

Great dashboard, storytelling and the presentation of findings.

The filters at the top allow users to drill down by year, category, state, and other variables, enhancing the usability of the dashboard for targeted analysis. The key metrics (Sales, Profit, Quantity, and Discount) are also well-placed at the top, providing a quick overview of performance with comparisons to the previous year. This helps users grasp the current state at a glance.

The line graphs for each metric show clear monthly trends, and the markers on max/min points are useful for emphasizing highs and lows.

The map highlights regional performance, which ties into the project summary's insights about regional profitability. The ability to see the sales breakdown by state visually supports the recommendation to focus on specific cities.

Color Usage:

- The dashboard uses blue, brown, and red tones in various parts, but the color scheme could be more consistent across visuals. For example, using a uniform color to represent negative and positive progress throughout the dashboard would help with clarity.
- Negative values should appear in red on the map to indicate immediately regions with losses. This would make it easier for users to spot underperforming areas at a glance.

Dashboard:

I really like how tidy, consistent, and even a little personal touch with the unicorn logos! It showcases multiple Tableau skills you already gained.

However, the bar plot is challenging to interpret because it's unclear which year each bar represents (current vs. previous). Adding labels or a legend to indicate the year for each bar would greatly improve readability.

When selecting "Profit" and the year "2018," the label on the bar plot for categories (specifically for "Furniture") is combined with previous year labels, making it difficult to distinguish between them. To improve clarity:

- Ensure that each year's labels are clearly separated or color-coded.
- Use a distinct indicator for the current year versus the previous year to avoid confusion.

The pie chart that is contained upon hovering over the map it's difficult to interpret because sometimes category description is not distinguishable. Make sure to make the font description smaller so it can fit within the preview window.

In addition, on the Project Summary file, the dashboard link was different from the dashboard link you uploaded.

Lastly, a minor detail, it is better to have thousand separators on the tooltip for subcategories for the previous year's values. This would enhance the user's readability.

Project Summary

Clarity and Conciseness:

Well done: The report effectively translates complex data analysis into clear, actionable insights. The overview and key insights sections are concise and to the point, helping the reader to understand the main issues. The recommendations are straightforward and logically derived from the insights, making it easier for stakeholders to understand the actions needed. Good use of specific numbers and KPIs to reinforce findings.

Structure and Organization

Well done: The report is well-organized with distinct sections, including an overview, problem statement, key insights, recommendations, and conclusion. This structure makes it easy to follow.

Improvement: Consider introducing a summary of findings and recommendations at the start (abstract), giving readers an immediate overview of the report's value. Also, you could use a table of contents for easy access to each subheading. This would allow readers to navigate to specific sections of interest easily.

Relevance and Insightfulness

Well done: the focus on the relationship between discounts, sales, and profitability directly addresses the needs of the executive audience, providing actionable insights. The analysis of specific regions and categories is particularly insightful.

Actionable Recommendations

Well done: The recommendations are relevant and specific, such as focusing on profitability in loss-making cities and optimizing delivery times. These suggestions align with the identified issues and offer practical next steps for the business.

Improvement: Consider mentioning any next steps, such as further analysis or proposed timelines for implementing the recommendations. For example, the “Quality-Based Supplier Optimization Program” recommendation could be expanded by suggesting how quality measures might be implemented or monitored.

Project Presentation

Content Relevance and Insightfulness:

Well done: The analysis provided a comprehensive view of key issues affecting Unicorn's profitability, specifically in terms of regional performance, the impact of high discounts, and delivery delays. The recommendations on strategies for low-profit cities, like Houston and Philadelphia, and revisions to discount strategies demonstrate a thoughtful approach to enhancing profitability. These insights are directly relevant to Unicorn's goals and provide valuable guidance for operational improvements.

Improvement: While the focus on high discounts and their negative effect on profitability is clear, the argument could be strengthened by briefly explaining the basis for the specific discount recommendations (e.g., the rationale behind limiting discounts to under 30%). A comparative analysis showing the correlation between lower discount rates and increased profitability in certain cities or product lines could make these suggestions more compelling. Additionally, incorporating a profit ratio metric alongside absolute profit figures would provide a more balanced view, especially for smaller cities where high-profit ratios may not be immediately visible due to lower absolute profit values.

Narrative Clarity and Focus:

Well done: The presentation flows logically from introduction to findings and recommendations, making it easy for the audience to follow the analysis. The focus on the primary themes of

customer behavior, product performance, and regional profitability aligns well with the project's objectives. Also, good time management to effectively cover these points within the time limit.

Engagement and Delivery:

Well done: The navigation through the findings was smooth, with clear and confident delivery of key points. Including actionable recommendations supported by specific data points helped maintain the audience's focus on practical solutions rather than just the analysis.

Improvement: Engagement could be further enhanced by adding a bit of enthusiasm and the content to be conveyed with genuine passion. Aim to speak more naturally, as if sharing these insights from personal experience rather than reading it from the presentation. This would make the delivery feel more heartfelt and help the audience connect more strongly with the insights presented.

Project Presentation

Well Done:

- I appreciated how you introduced the project. You clearly defined the problem you are solving and what the project addresses.
- I really liked how you guided me through the presentation without simply reading the slides. It kept me engaged throughout.
- You focused on the most impactful parts of your project and avoided going into too much detail that may overwhelm the audience.
- I liked how you spoke clearly, confidently, and at a moderate pace.
- Perfect time management in presenting the project.

Improvement:

- Consider including a slide early in the presentation to outline the sections that will be covered. This would give the viewer a clear roadmap of what to expect.
- While your presentation was great, the audio was a bit low without earphones. Make sure to have the microphone closer.
- Your recommendations were insightful, but it would be helpful if you elaborated on them a bit more to provide a deeper understanding.
- I really enjoyed how you reflected on the lessons you learned from this project. However, keep in mind that in a hypothetical business setting like this, stakeholders might prefer you focus more on actionable outcomes and KPIs.
- The final slide was great, but it might be more impactful with fewer words and more time spent discussing each point in detail.
- Try to maintain good posture, smile, and make “eye contact” with the camera when possible. 😊
